

Protected Landscape and Natural Monument of Las Tuerces

Explore Las Tuerces, an impressive karst landscape shaped by the action of water on limestone rock. Discover the Las Tuerces Labyrinth, a network of corridors and alleys between blocks of rock, and marvel at the whimsical shapes of gigantic stone mushrooms, natural bridges and arches. It seems like you are on another planet or in a fairy tale. In addition, you will be able to observe the flora and fauna of the place, such as holm oaks, oaks, vultures, eagles or roe deer.

Tour the La Horadada Canyon, that impressive gorge of karst origin sculpted by the Pisuegra River, which can be accessed from Olleros de Pisuegra or be enchanted by its panoramic view from Monte Cildá, where some remains of an Iberian town later occupied by the Romans, who built a fortress there. The visit to Las Tuerces is completed with the rock hermitage of Saints Justo y Pastor in Olleros de Pisuegra, a work of such magnitude that it is considered by some authors as "the Cathedral of the Stone" or "the basilica of rock hermitism." We are waiting for you with natural surprises in unique ways!

ENVIROMENTAL AREAS

wildlife:

Birds of prey: golden eagle, booted eagle, goshawk, sparrowhawk, peregrine falcon, kestrel, pale harrier.
Mammals: fox, wild boar, sable, wild cat, genet, weasel, rabbit, hare. There are thirteen species of reptiles detected and amphibians such as the salamander, common midwife toad or San Antonio frog.
